DISCOVERY

Container Solutions

Give me six hours to chop down a tree and I will spend the first four sharpening the axe.

Abraham Lincoln

WHY DISCOVERY

Why fight the symptoms when you can address the root of the problem and solve it for good?

When dealing with complex applications and modern IT infrastructure, it is easy to get stuck in the details and lose sight of the big picture. At Container Solutions, we take the perspective of creating lasting solutions that tackle the problem right at its core. With Discovery, you will be equipped to make the right decisions for your organisation to create sustainable and future-proof solutions.

It all begins with Discovery.

OUTCOME & BENEFITS

Our experts slow things down and take a look at the big picture: this way, the fundamental issues are brought to light. During a Discovery, you can expect 3 main outcomes:

Cloud Native Maturity Assessment: Based on our research-driven Discovery learnings, you will gain a crystal-clear picture of the positives and negatives of your IT efforts. Think of it as a snapshot of your current state. It's the easiest way to determine if and where action is needed.

Discovery Presentation: Data acquired from your Discovery session will be presented to the management and team. We will dive deep into the main pain points, how they are connected, and the best part: your opportunity areas.

Discovery Report (optional):
This is no ordinary report. Building on the comprehensive Assessment and Presentation elements of Discovery, our team of experts takes an in-depth look into your industry's trends, how your organisation fits within it, and creates a roadmap of next steps. With this document in your hands, you will be fully equipped to make the right decisions for your organisation and create sustainable, future-proof IT solutions.

WHAT IS DISCOVERY?

A basic Discovery takes two days. A team of two IT engineers, along with a design strategist acting as a facilitator, will work on site with your team to explore in detail all the challenges you face. We will use customised and adapted research methods and tools to explore the following areas:

- **Stakeholders:** how are they involved in your overall process, where are the tensions or opportunities, and how can you better leverage these relationships?
- **Software development:** what does your process look like and is it functioning optimally?
- **Application:** what are its functionalities and architecture?
- **Technology Stack:** what does it look like, and what are its strengths & weaknesses?
- **Infrastructure:** what is the current state of your infrastructure and how does it influence delivery capabilities?
- **Bottlenecks:** Where do they lie with people, tools, processes?

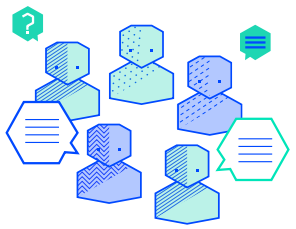
DISCOVERY OVERVIEW

2 DAYS DISCOVERY

Day 1

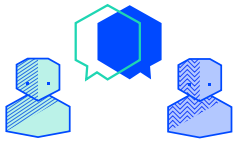
SEE THE BIG PICTURE



Discovery workshop

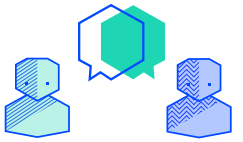
Interactive workshop with the development team and relevant stakeholders.

DIG DEEPER



Day 2

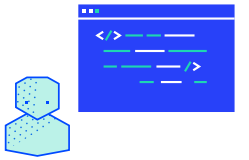
DIG DEEPER



Individual interviews

Individual interviews with relevant stakeholders.

SEE WHAT'S THERE



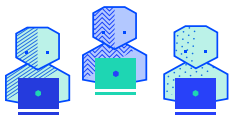
Code assessment

Looking into your code, infrastructure and setup.

PoC (optional)

3-5 days

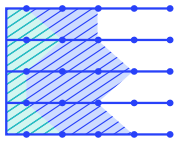
GET YOUR HANDS DIRTY



PoCs

To further assess the introduction of new processes and technology, we run a proof of concept (PoC).

OUTCOME



Cloud Native Maturity Assessment

Based on the Discovery learnings, this assessment will provide you with a clear picture of your IT landscape. It is the easiest way to determine if and where action is needed within your organisation.

Discovery presentation

First we consult with the entire CS team to analyse, reflect on, and formulate conclusions. After looking at the data with different experts, from all angles, we deliver a presentation with all our findings.

Discovery report (optional)

A detailed report offering recommendations and a next step roadmap will be delivered 1-2 weeks following the Discovery presentation. This is usually combined with a second presentation with management and relevant stakeholders.
